USGS National Groundwater Monitoring Network Cooperative Agreement Final Technical Report

Award Number: G16AC00410

Agency Name: Missouri Department of Natural Resources, Missouri Geological Survey

Title: The Missouri Department of Natural Resources' Missouri Geological

Survey proposal to collect well data from existing state observation wells in order to fill gaps in the National Groundwater Monitoring Network database and to add Missouri's groundwater observation wells to the

national network.

Author and Affiliation: Scott Kaden

Award Term: September 1, 2016 - August 31, 2018

Date of Final Report: October 18, 2018

Background of Proposal

The Missouri Geological Survey (MGS) has been collecting groundwater level data for over 60 years and is an existing data provider to USGS. Because of this, MGS's proposal was focused on the cleanup and addition of well data which was completed to fulfill two tasks in support of this grant. These tasks were conducted in fulfillment of Objective 3: Filling gaps in information at NGWMN sites and Objective 4: Well maintenance.

At the time of the proposal, MGS operated 172 groundwater observation wells, but had only 145 wells in the NGWMN database. The goals set forth to fulfill Objective 3 were to establish benchmarks at the 145 wells that were in the database and to search existing MGS information for water quality data for these wells. The goal for Objective 4 was to add missing data for the 27 wells that were not in the NGWMN database to increase Missouri's total well count to the 172 wells operated by MGS in addition to verifying that data was complete for the existing 145 wells already in the database.

Problems Encountered Completing Grant Deliverables

At the beginning of the grant period, the MGS Groundwater Level Observation Well network included 172 wells for which MGS proposed to establish benchmarks for 145 of these wells that were currently included in the NGWMN database. Due to budgetary constraints and returning of wells to the original owners, the MGS network was downsized to 148 wells in June 2017. Twenty wells originally in the NGWMN database were eliminated while the remaining 125 were not. An additional four wells that were not previously in the database were also eliminated. Since June 2017, MGS has added one additional well to bring the total number of wells in the observation well network to 149.

Table 1 lists all wells that are currently or were formerly in the observation well network and is divided into three statuses.

- 1. Eliminated 24 wells (20 previously in the NGWMN database and four that were not) which were discontinued from use as an observation well.
- 2. Added to Database 24 wells which were not previously in the NGWMN database. Information for these wells was provided to USGS to be added to the database.
- 3. Previously in Database 125 wells that were part of the original 145 wells in the NGWMN database that are still active.

Per the grant proposal, benchmarks were to be established for the 145 wells previously in the NGWMN database. Six wells where benchmarks were established were eliminated from the network, as previously described, after the benchmark was constructed. An additional six sites had two wells each for which only one benchmark was established at the site. This reduced the number of benchmarks constructed to 133 for wells previously in the database. However, MGS proceeded to construct benchmarks at the remaining network wells that were not previously in the database. Therefore, benchmarks have been established for all 149 wells, at 143 sites, that are currently active.

Due to the elimination of 24 observation network wells, MGS was not able to add data to the NGWMN database for all the missing 26 wells as originally proposed. However, data for the missing 14 wells still in operation, plus the missing data for the reminder of the original 145, has been provided to USGS for entry into the NGWMN database.

Methods Utilized to Complete Workplan Deliverables

Benchmarks were established according to USGS standards as described in the publication titled *Methods* of practice and guidelines for using survey-grade global navigation satellite systems (GNSS) to establish vertical datum in the United States Geological Survey: U.S. Geological Survey Techniques and Methods, book 11, chap. D1, and illustrated in figure 10 of this publication. Elevations of the benchmarks were determined using a Trimble R8 Model 3 GNSS Receiver. Differential leveling was performed at each site to determine the vertical difference between the benchmark and static water level measuring point (MP) or reference point for the well. Differential leveling was accomplished with an optical level and leveling rod. Details were recorded on a *Benchmark Recovery and Establishment Form* and have been provided to the USGS Central Midwest Water Science Center (CMWSC) to be entered into the National Water Information System (NWIS). Copies of these forms will be available as deliverables for this grants as requested.

Although MGS maintains and operates the NGWMN wells located in Missouri, personnel with the CMWSC edit the well data and associated information shown in the NGWMN portal. Mr. Daryll Pope of the USGS provided MGS with spreadsheets of the wells and information currently in the NGWMN. As of July 31, 2018 there were 141 wells in the "SITE INFO" spreadsheet provided by Mr. Pope. Of these 141 wells, four (Winona, Marion Bottoms, Marshfield and Four Rivers) were eliminated from the MGS network and two (USGS-D1, P2 Potosi Dol and USGS-D1, P3 Bonneterre Fm) are maintained by CMWSC and are not part of the MGS network. MGS files and records were mined to find any information that was missing for the remaining 135 wells. In addition, 14 wells and associated data were added to the NGWMN "SITE INFO" spreadsheet bringing the total number of MGS wells to 149 as discussed previously.

MGS also edited the "CASING" and "SCREEN" spreadsheets and updated them with appropriate revisions. The "SCREEN" spreadsheet only contains 38 wells as most of Missouri's observation wells are constructed in consolidated formations and with open hole completions. All 149 current observation wells are included in the "CASING" spreadsheet. Some wells are listed twice since they have multiple strings of casing. Some data in the "SCREEN" and "CASING" spreadsheets is unknown. This information will be collected as part of a current NGWMN grant to conduction downhole video logging of the wells.

All three spreadsheets, "SITE INFO", "SCREEN" and "CASING", were sent to Mr. Daryll Pope of the USGS as part of this grant deliverables.
