

**USGS National Ground-Water Monitoring Network Cooperative Agreement  
Final Technical Report.**

**A. Project Information Summary**

1. Award Number: G19AC00184
2. Agency Name: University of Nebraska-Lincoln, School of Natural Resources,  
Conservation & Survey Division
3. Title: UNL proposal to expand web services in order to add up to 5,000 wells to the  
NGWMN
4. Author Information: Aaron Young  
University of Nebraska-Lincoln  
School of Natural Resources, Conservation & Survey Division  
3310 Holdrege St., 602 Hardin Hall  
Lincoln, NE, 68583-0996  
402-472-8339, ayoung3@unl.edu  
  
Mark Burbach  
University of Nebraska-Lincoln  
School of Natural Resources, Conservation & Survey Division  
3310 Holdrege St., 623 Hardin Hall  
Lincoln, NE, 68583-0996  
402-472-8210, mburbach1@unl.edu
5. Award Term: July 15, 2019-July 14, 2020
6. Final Report Date: September 3, 2020

## **B. Main body of the report**

### **Overview of work planned and accomplished during the project**

The Conservation and Survey Division at the University of Nebraska-Lincoln (CSD) has been a data provider to the National Ground Water Monitoring Network (NGWMN) since 2017. In 2019, the CSD received funding under Objective 1 to serve water-level data for an additional 5,308 wells screened in the High Plains Aquifer (HPA) to the NGWMN. The additional data is stored in a different database than data currently served to the NGWMN. Existing web services will be modified to serve data for the additional wells.

### **Detailed description of work accomplished under each objective**

The additional 5,308 wells added to the NGWMN by the CSD were composed of 3,857 wells specifically requested by the USGS Nebraska Water Science Center (USGS NWSC) under Objective 1. In addition to these wells, the USGS-NWSC requested the CSD, at its discretion, add additional wells which the CSD deemed valuable to assessing water-level changes in the HPA. An additional 1,451 wells were selected by the CSD and added to the NGWMN.

All wells are screened in the HPA. All wells were sorted and evaluated for minimum required data elements. Hydrographs were individually assessed for obvious errors, and corrected where necessary. Wells were classified using NGWMN Tip Sheets. Some wells are missing required information; Total depth is missing from 326 wells, and construction data is missing or incomplete for 3,731 wells. These wells were added to the NGWMN and classified as “Special Studies” sites at the direction of the USGS. If funded, future proposals will populate missing information for sites that are incomplete.

The CSD maintains two databases. One contains data from our Real-Time Observation Well Network. Web services were established in 2017 to deliver data to the NGWMN from this database. Our Historic Water-Level Database contains manual measurements collected from more than 20,000 wells over the past century. Data associated with the additional 5,308 wells added under this agreement reside within the Historic Water-Level Database. Under Objective 1 of this agreement, our web services were modified by an outside contractor, Phoenix Web Group, to pull data from both databases and serve it to the USGS in the requested format.

### **Description of any updates made to web services during period of award**

The CSD’s existing web services were replaced by a single set of web services that provide data for both the Real-Time and Historic data sets. The new web services are in the format:

[http://XXXXXXXXX/USGSService.svc/GetWaterLevels/\[well\\_ID\]/\[start date\]/\[end date\]](http://XXXXXXXXX/USGSService.svc/GetWaterLevels/[well_ID]/[start date]/[end date])

[http://XXXXXXXXX/USGSService.svc/GetConstruction/\[well\\_ID\]/\[start date\]/\[end date\]](http://XXXXXXXXX/USGSService.svc/GetConstruction/[well_ID]/[start date]/[end date])

[http://XXXXXXXXX/USGSService.svc/GetLithology/\[well\\_ID\]/\[start date\]/\[end date\]](http://XXXXXXXXX/USGSService.svc/GetLithology/[well_ID]/[start date]/[end date])

### **Description of any problems encountered in serving data to the NGWMN data portal**

Our new web services are functioning, and no issues have been reported to the CSD by NGWMN tech support. The CSD noted, and reported to the NGWMN tech support, that the large amount of data being reported to the NGWMN has significantly slowed the NGWMN data portal. This issue is being resolved by the NGWMN.

## **C. Table of sites added to the NGWMN**

Site Name	Well Depth	Local Aquifer Name
9N 10W 3CCC	25	High Plains aquifer
